

Fine-scale plankton distribution across the Ligurian Front from glider and UVP6

T. Panaiotis, A. Poteau, M. Picheral, C. Catalano, L. Coppola, J.O. Irisson

Computational Plankton Ecology (COMPLEX team)
Laboratoire d'Océanographie de Villefranche

UVP user meeting
15/09/2022
Thelma Panaiotis

UVP6 and glider

UVP6 LP

- particles 60 μm - 2 cm
- organisms 1 mm - 2 cm
- imaging rate 0.5 - 1.3 Hz

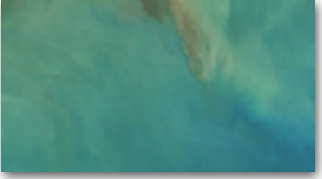

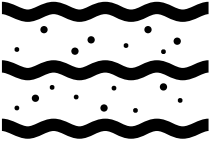

UVP6 and glider

UVP6 LP

- particles 60 μm - 2 cm
- organisms 1 mm - 2 cm
- imaging rate 0.5 - 1.3 Hz

Seaexplorer glider

- temperature 
- salinity 
- chl a 
- oxygen 
- cdom 
- bb700 

Study area

- NW Mediterranean Sea

Mission planning

Round trip between Nice and Dyfamed

- ▶ out in 0-600 m: go below the current
- ▶ back in 0-300 m: better horizontal resolution

Ligurian current: 25 km offshore, 0-200 m deep

1 mission = 2 round trips

Mission overview

- ▶ started on 28/01/2021
- ▶ ended on 28/06/2021
- ▶ 5 months duration

10 missions of 12-14 days each

Mission overview

- ▶ started on 28/01/2021
- ▶ ended on 28/06/2021
- ▶ 5 months duration

10 missions of 12-14 days each

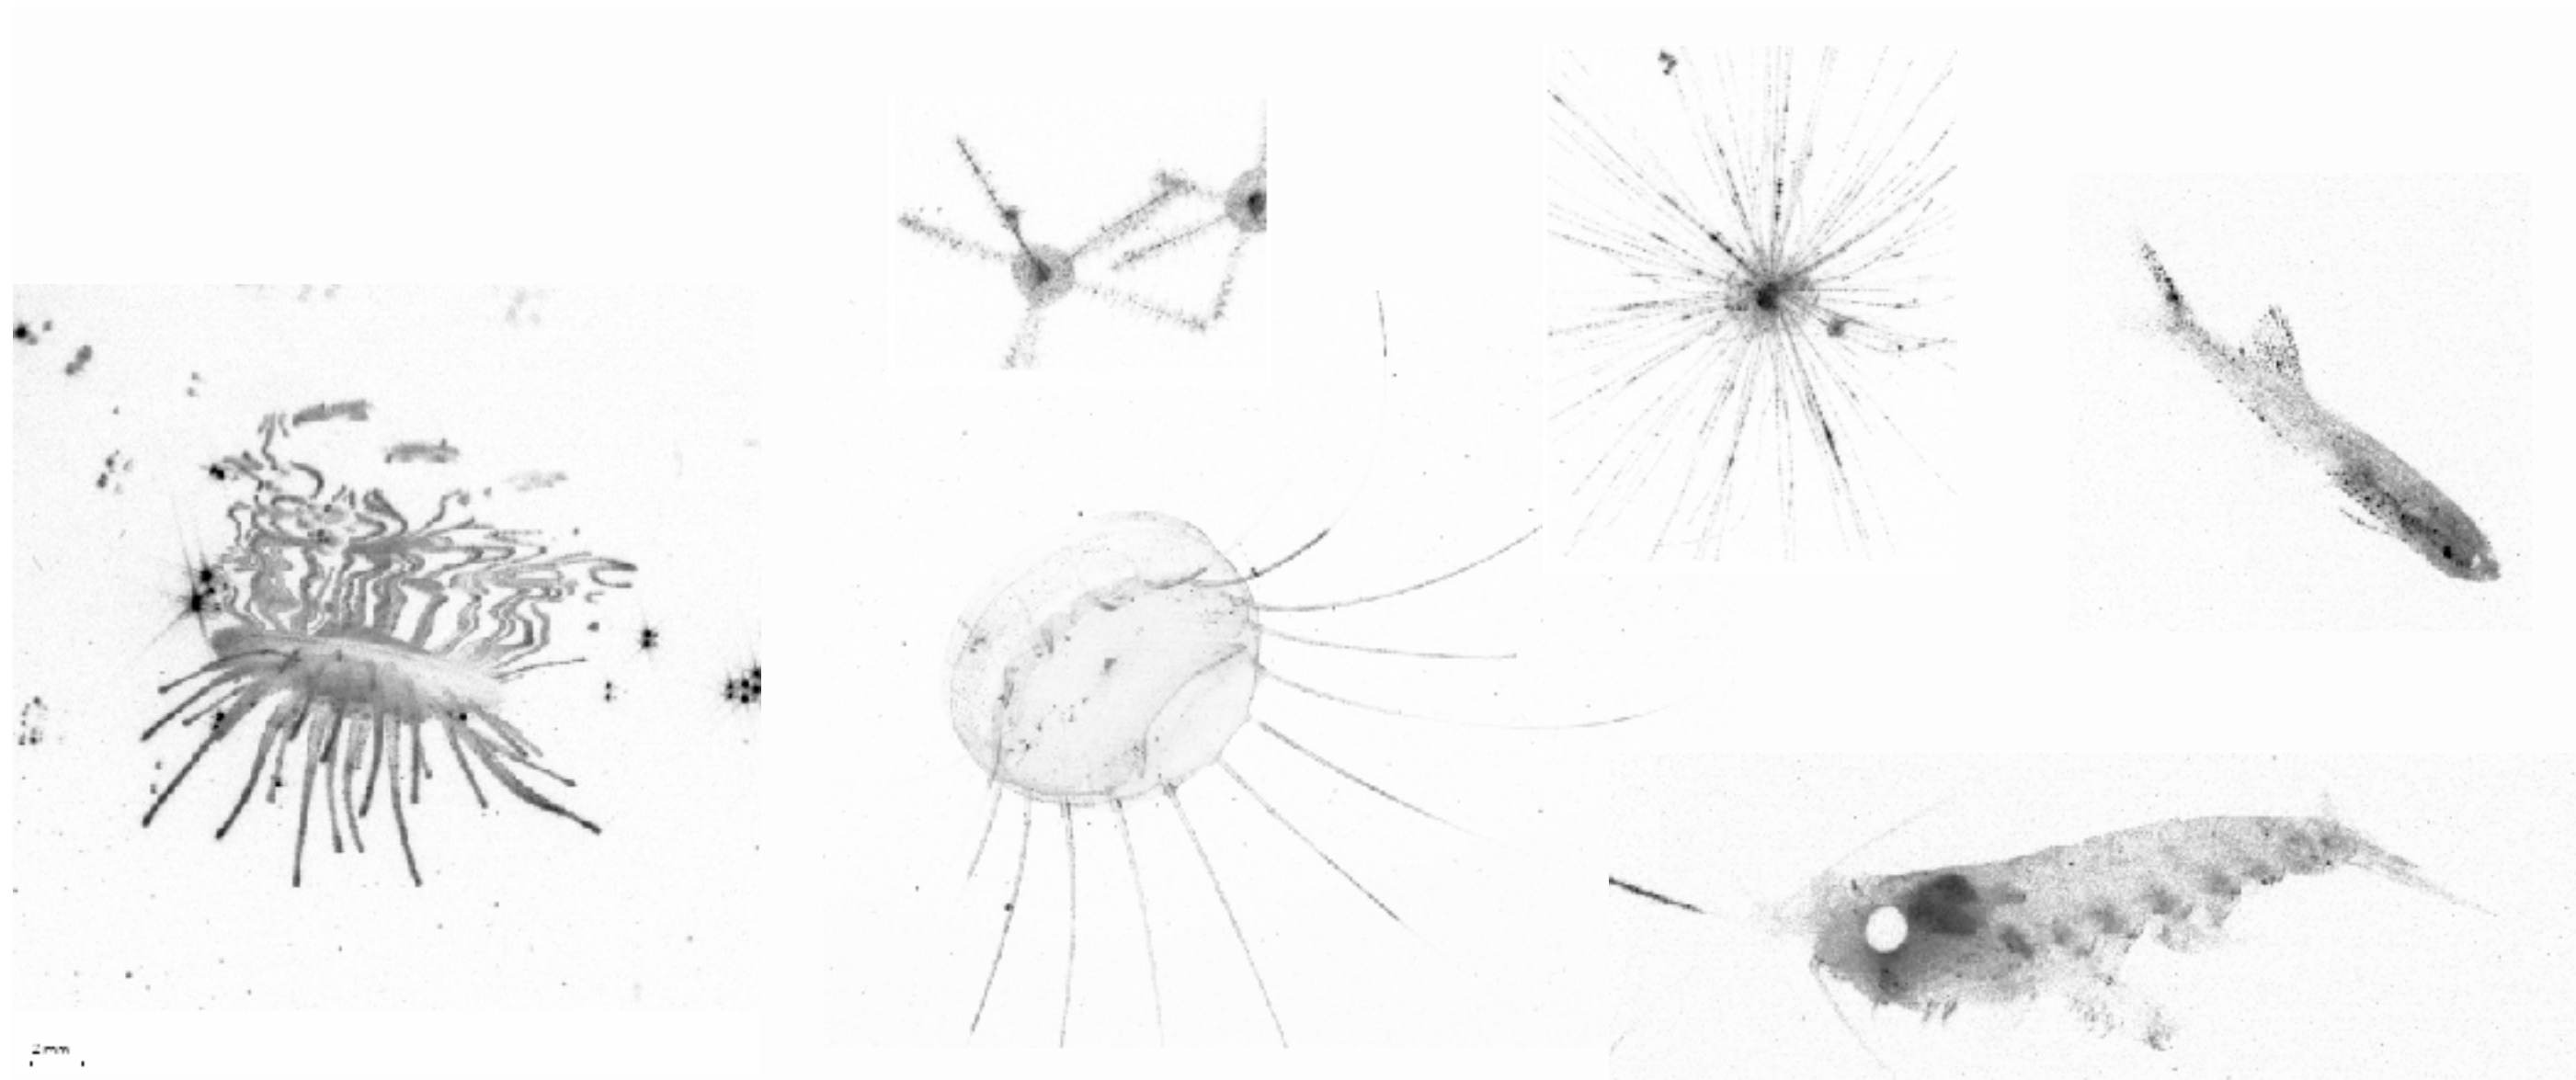

2 days needed between each mission

Also depends on weather conditions

A few numbers

- ▶ 10 missions
- ▶ 5000 profiles (1900 below 500 m)
- ▶ 1.1 million images
 - ▶ 785,000 during cruising
 - ▶ 435,000 in *back* transects (better horizontal resolution)
